

**Agenda Item:** Presentation of Park Programs for 2022

**Background:** Recognizing the importance of cultivating career opportunities for young adults before they enter the workforce, the Parks Department developed an intern position for a Parks Program Developer. A set of deliverables for the student included a proposed programming calendar for our Parks.

A Texas A&M University, Galveston, Maritime Studies student spent the winter/spring semester (January – May) working with the Parks Coordinator and Guest Experience Manager to develop programs. Some programs are possible with support from community partners and focus on educational content related to our coastal environment.

Today's presentation includes programs already executed this season, upcoming programs, and several program series in development.

**Staff Recommendation:**

**Funding Source (if applicable):** Program funding is allocated in the Park in which the program is delivered.
